Daily Monitoring
Data collected from the shop as people transact. It is collected through the POS system
Data is moved from the shop database to the Data Warehouse using the ETL Pipeline
Data Processing is done in Databricks, SQL is used to process the data
Data is extracted from our DBMS(Databricks) to Excel for analysis
Findings from the data are explained with a presentation in Canva or PowerPoint
A dashboard is created in PowerBI and Data Studio to continuously monitor the sales
Data is stored in the shop database
Our Data Warehouse is Databricks
We create graphs, charts, and tables on Excel
